## Oranges

Global orange production for 2014/15 is forecast to decline 4 percent from the previous year to 48.8 million metric tons as lower yields are forecast for Brazil, China, and the EU. As a result of the reduced availability, fruit for processing is expected to drop over 7 percent with exports down 3 percent.

United States' production remains at a reduced level at 6.1 million tons as the crop in Florida continues to decline as citrus greening constrains output and area remains at reduced levels.
Exports are forecast slightly lower while consumption rises.

Brazil's production is forecast down 3 percent to 16.3 million tons based on lower yields due to the effects of dry

## Citrus: World Markets and Trade

Morocco's production is forecast to fall 25 percent to 750,000 tons as hot weather negatively affected the bloom and fruit set. Consumption and exports are forecast to drop 25 percent following reduced production and a government decision to implement strict control measures on exports in order to avoid quality problems.

On August 7, 2014 Russia issued a one-year ban on certain agricultural imports, including fruit, from the United States, EU, Canada, Australia, and Norway. Imports are forecast down 10 percent to 420,000 tons as a result of the ban and due to the devaluating Ruble, a slumping economy, and rising inflation.

## Orange Juice

Global orange juice production for 2014/15 is forecast down to 1.8 million tons ( 65 degrees brix) on less fruit available for processing in Brazil and Mexico. Consumption is again forecast to match production while stocks decline for the third consecutive year.

## United States ${ }^{\text {' }}$

 production is forecast down 2 percent to 481,000 tons as a result of lower availability of fruit in Florida.

Consumption is forecast up 1 percent on increased imports and lower ending stocks.
Brazil's production is forecast down 10 percent to 1.0 million tons on lower crushing yields as well as reduced oranges for processing. With exports from the world's largest producer again forecast to exceed production, stocks are reduced to the lowest level in 5 years.

Mexico's production is forecast to drop over 25 percent to 130,000 tons as more fresh oranges are consumed than processed. Consequently, juice exports are forecast to decline by more than 25 percent.

With less fruit available for processing, EU's production is forecast to fall 8 percent to 100,000 tons. Exports are forecast slightly lower while imports are forecast to be up 10,000 tons to 600,000.

China's production is forecast down 9 percent to 50,000 tons as less fruit is available for processing. Production will primarily serve the domestic market as juice grows in popularity.

## Tangerine/Mandarin

Global production for 2014/15 is forecast at a record 27.0 million metric tons, up 700,000 tons from last year with an increase in China more than offsetting a drop in Morocco. Fresh consumption continues to expand with greater supplies. Trade is down as a 30 percent drop in exports from Morocco exceeds the growth from China and Israel.

United States' production is forecast to grow 2 percent to a record 711,000 tons as the growth in California more than offsets the drop in Florida. Fresh consumption is flat while imports decline 5 percent.

China's production is forecast to jump 650,000 tons, to a record 18.5 million on higher yields and area expansion in provinces such as Guangxi, Fujian, Yunnan and Shaanxi to offset the declines due to citrus greening in provinces like Jiangxi and Guangdong. China represents 70 percent of global production and 45 percent of global exports. Rising fresh consumption is forecast to keep pace
 with the growth in production. Exports are forecast to grow due to available supplies and growing demand.

EU's production is forecast down 92,000 tons to 3.1 million. Consumption is flat while exports fall on lower available supply and a drop in demand due in part to Russia's ban.

Japan's production is forecast flat at 890,000 tons although the crop is considered an "on-year" in the production cycle. Fresh consumption is virtually unchanged as imports remain at 20,000 tons.

Turkey's production is forecast at a record 960,000 tons, up 80,000 from the previous year. Exports are forecast level at 520,000 tons while consumption rises on stronger demand and increased available fruit.

Production in Morocco is forecast to fall 235,000 tons to 925,000 on unfavorable weather that negatively affected the bloom. Exports are reduced due to the drop in supplies.

## Grapefruit

Global production for 2014/15 is forecast to rise to a record 6.2 million metric tons as growth in China more than offsets declines in Israel and Turkey. Exports fall 9 percent as consumption grows 3 percent on strong demand in China.

## Lemon/Lime

For 2014/15, global production is forecast 9 percent higher to 6.7 million metric tons, on favorable weather in the EU and Argentina and the recuperation of trees that had been affected by frost the previous year in Argentina. Global exports are forecast up slightly on increases in Argentina and the EU. Fruit for processing is up nearly 25 percent as Argentina has more available supplies.

## FAS Reports from Overseas Offices

The Citrus: World Markets and Trade circular is based on post reports submitted since December 2014 and on available secondary information. The individual country reports can be obtained on FAS Online at: http://gain.fas.usda.gov/Pages/Default.aspx.

## PSD Online

The entire USDA PSD database is available online at http://www.fas.usda.gov/psdonline.

## Additional Resources

Please refer to the USDA-FAS Citrus website at: http://www.fas.usda.gov/commodities/fruits-and-vegetables/citrus-fruit for additional data and analysis.

Situation and outlook information on U.S. citrus can be obtained from the
USDA-Economic Research Service at: http://www.ers.usda.gov/topics/crops/fruit-tree-nuts.aspx.

## Future Releases and Contact Information

Please visit http://www.fas.usda.gov/data/citrus-world-markets-and-trade to view archived and future releases. The next release of this circular will be in May 2015.

To receive the circular via email, go to:
https://public.govdelivery.com/accounts/USDAFAS/subscriber/new.
For further information, please contact Reed Blauer at (202) 720-0898 or Reed.Blauer@fas.usda.gov

Split years refer to the harvest and marketing period, which corresponds roughly to November-October in the Northern Hemisphere.

For the Southern Hemisphere, harvest occurs almost entirely during the second year shown and the harvest and marketing period begins in the second year shown:

Argentina - January through December
South Africa - February through January
Australia - April through March
Brazil - July through June
Import and export totals may not equal due in part to reporting anomalies such as those listed above.

|  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: |

For 2007/08 and after, one metric ton of 65 degrees brix equals 344.8 gallons at 42 degrees brix and $1,392.6$ gallons at single strength equivalent. One metric ton of 65 degrees brix equals 344.8 gallons at 42 degrees brix and $1,405.88$ gallons at single strength equivalent for 2006/2007 and earlier.

Split years refer to the harvest and marketing period, which corresponds roughly to October-September in the Northern
Hemisphere.
For the Southern Hemisphere, harvest occurs almost entirely during the second year shown and the harvest and marketing period begins in the second year shown:

South Africa - February through January
Australia - April through March
Brazil - July through June
Import and export totals may not equal due in part to reporting anomalies such as those listed above.

Split years refer to the harvest and marketing period, which corresponds roughly to October-September in the Northern
Hemisphere and April-March in the Southern Hemisphere. For the Southern Hemisphere, harvest occurs almost entirely during the second year shown. The harvest of lemons often extends throughout the year.

Import and export totals may not equal due in part to reporting anomalies such as those listed above.

[^0]:    Split years refer to the harvest and marketing period, which corresponds roughly to November-October in the Northern Hemisphere.

    For the Southern Hemisphere, harvest occurs almost entirely during the second year shown and the harvest and marketing period begins in the second year shown:

    Argentina - January through December
    South Africa - February through January
    Australia - April through March
    Brazil - July through June

    Import and export totals may not equal due in part to reporting anomalies such as those listed above.
